

Coastal District

Coastal Zone Management

According to the ADNR's Coastal Zone and Coastal District Boundaries Map (www.alaskacoast.state.ak.us/GIS/boundary.htm), the project area is not located within the coastal zone for Alaska.

Flood Plain Management

Chalkyitsik does not participate in the National Flood Insurance Program, but some flood hazard information is available for the project area from the USACE flood hazard webpage (www.poa.usace.army.mil/en/cw/fld_haz/allakaket.htm). That information indicates that the last recorded flood event was in 1997 and that flood events in the area are primarily caused by ice jams. Significant flooding occurred in 1937, 1947 or 1948, and 1967. The 100-year flood level elevation is estimated at 110 ft, which is about 3 ft higher than that recorded for the 1967 flood event. The elevation datum is based on the Bench Mark #1, elevation 100.0 ft, of the NWS slope gage.

Additional Information

In addition to identifying any concerns and/or issues your agency might have with the proposed project, the following information is requested:

1. Identify any potential conflicts the proposed project may have with goals or objectives of the local coastal management program.
2. At the present time, does your district have any objections to the proposed project?
